

## Maytech for Media & Broadcasting

## Introduction

Maytech has a rapidly expanding customer base of media and broadcasting clients. Production companies and broadcasters rely on Maytech for the secure distribution of large video programming content and 3D visualisations which require fast transfer for terabytes of data.

## Maytech's Product Suite

The product suite features multi-layered security, granular administration controls and detailed user logging and tracking. Quatrix Business and Enterprise are sold as a software as a service and Quatrix Custom is sold as a license with support and maintenance.

### Quatrix Business

Simple one-step web-based secure file sharing with enterprise level controls empowering IT to enforce compliance, data protection and information security policies.

### Quatrix Enterprise

Advanced data transfer platform providing a unique site with granular administration controls and compliant with global security standards.

### Quatrix Custom

State of the art technology platform for building customised high speed data transfer solutions for complex workflows.

## Core Features

**Security:** End to end encryption. Data is encrypted in transit using HTTPS, SFTP or FTPS and at rest using AES-256 bit encryption. Or for advanced encryption leverage the browser based PGP module for advanced end-to-end encryption.

**Data Residency:** Retain complete control over your data. Customer data is only stored at the chosen location in compliance with EU, US and international privacy policies. Maytech never backup or replicate outside of your chosen data centre, nor do we keep enduring incremental backups. Service can be provisioned at any global Hub located over four continents in Tier 3 data centres.

**Central Administration:** Granular end user control – create personalised access and operation policies for each user, delegate sub-administration roles. Full audit trail and reporting with interactive logs or export to a spreadsheet for off site analysis.

**Global Acceleration:** Fast global file sharing with no file size limits over a high-speed and uncongested global data network. Data can be mirrored between Hubs providing additional resilience and fast regional access anywhere in the world, including over high latency links.

**Branding:** Retain your corporate identity and integrate with your website and in-house systems. There is no third party branding and no requirement for users to register on a third party platform to transfer data.

**Compliance:** Service is compliant with international standards including HIPAA, PCI-DSS and EU Data Protection. The controls associated with the confidentiality of customer data form part of Maytech’s information security management system which is ISO 27001 certified and audited by Lloyds Register Quality Assurance.

## Media & Broadcasting Enterprise Plans include:

- ✓ Working with your vendor management program: understanding your requirements and appropriate service levels through to the procurement process, provisioning, training, and on-going account management and reviews, building strong and lasting relationships.
- ✓ Flexible enterprise plans based on user, storage and capacity requirements.
- ✓ Fixed and transparent pricing over one or three years. No additional bandwidth charges.
- ✓ Qualys daily security and compliance penetration testing program and reporting. Daily scanning of over 40,000 vulnerabilities.
- ✓ Premium Care support: primary response times and dedicated 24/7 support line.
- ✓ Professional Services: consulting and training to assist with integration, customisation and deployment of solution.

## Additional Modules

### Global Acceleration:

Maytech’s proprietary replication technology for global mission critical, time gated work flows. (P.O.A)

### API:

Tighter integration with your workflows and processes using our core platform and published programming interface. (P.O.A)

### Single Sign On:

Integrated user authentication and provisioning with your enterprise directory (e.g. Active Directory, LDAP, etc). (P.O.A)

### Data Acquisition:

Embed secure file uploads into your website, customised to capture any form field metadata you require simultaneously with the associated files. (P.O.A)
